Revision to the Construction Schedule of the Kashiwazaki-Kariwa Nuclear Power Station Specific Major Accident Response Facilities

TEPCO, in a press release dated February 27, 2025 titled "Submission of a ‘Notification to Change the Construction Plan Related to Commercial Nuclear Reactor Installation Permit’"(only available in Japanese), announced the timeline for the completion of construction work on the specific major accident response facilities for Kashiwazaki-Kariwa Nuclear Power Station Units 6 and 7. However, the construction company building major structures indicated they need to review some of the construction activities and requested a revision to the schedule. We have also identified some unevenness in concrete surfaces of these major structures due to construction-related issues. In light of this situation, we have decided that the schedule will need to be revised.

We will review the schedule and provide further details once the revised construction schedule is finalized.

TEPCO continues to be committed to further improving the safety and reliability of the plant, learning from the lessons of the Accident at the Fukushima Daiichi Nuclear Power Station.

○Specific major accident response facilities

Facility with the necessary reactor pressure vessel depressurization and water injection functions and reactor containment vessel depressurization and cooling functions to prevent damage to the reactor containment vessel in an event where the plant sustains large scale damage due to an intentional airplane crash and wide range of facilities become unavailable.
