

FY2015 1st Quarter Earnings Results (April 1 – June 30, 2015)

Tokyo Electric Power Company July 29, 2015

Regarding Forward-Looking Statements

Certain statements in the following presentation regarding Tokyo Electric Power Company's business operations may constitute "forward-looking statements." As such, these statements are not historical facts but rather predictions about the future, which inherently involve risks and uncertainties, and these risks and uncertainties could cause the Company's actual results to differ materially from the forward-looking statements herein.

(Note)

Please note that the following to be an accurate and complete translation of the original Japanese version prepared for the convenience of our English-speaking investors. In case of any discrepancy between the translation and the Japanese original, the latter shall prevail.

Overview of FY2015 1st Quarter Earnings Results

Ordinary income achieved profits in FY2015 1Q for the second consecutive year.

< FY2015 1Q Earnings Results >

- Operating revenues decreased mainly due to fuel cost adjustments.
- On the other hand, ordinary income recorded 214.1 billion yen and 202.0 billion yen on consolidated and non-consolidated basis, respectively, due to decreasing of oil prices and utmost cost reduction efforts, resulting in increase for two years in a row.
 - In spite of the suspension of all nuclear power stations, in addition to decreasing of fuel prices and using less expensive fuel limited the influence of increasing fuel expenses resulted from yen depreciation.
 - > Extensive cost reduction efforts on a company wide level are implemented.

< FY2015 Full-Year Earnings Forecasts >

- FY2015 full-year forecasts is currently not able to be estimated due to the difficult situations that we can not expect when the nuclear power station will be resumed.

Note1: The lower row in operating revenues section represents revenues from external customers.

Note2: Along with the latest reorganization intend to adjust to upcoming full liberalization of the retail market, "Hydroelectricity and new energy generation" involved segment of "Power Grid" have been modified to segment of "Corporate". Accordingly, the segments for related companies will also be amended.

## FY2015 Key Factors Affecting Performance and Financial Impact

## FY2015 1rd Quarter Earnings Results Other Initiatives

#### <Cost reduction>

- In the New Comprehensive Special Business Plan, TEPCO and its subsidiaries & affiliated companies will implement further cost cuts of 1,419.4 billion yen and 108.5 billion yen, respectively from the previous Comprehensive Special Business Plan, and raise the target amount of ten years to 4,821.5 billion yen and 351.7 billion yen, respectively.
- The targets of TEPCO and its subsidiaries & affiliated companies for FY2015 are 356.8 billion yen and 34.3 billion yen, respectively. The prospect of achieving these targets will be determined around the end of 2015.

#### <Asset disposal>

Accumulated grand total of FY2011 to FY2013 regarding disposal of real estate, securities and subsidiaries & affiliated companies, which was the target set in the previous Comprehensive Special Business Plan, was achieved. Maximum efforts will continue to be made aiming most efficient business operation on the basis of growth strategies from the New Comprehensive Special Business Plan.

### <Streamlining Policy of New Comprehensive Special Business Plan (cost reduction)>

Efforts towards Nuclear Reform - 1

### [Reference] Framework for Nuclear Reform

- Since April 2013, TEPCO has advanced the Nuclear Safety Reform Plan so that we may realize our determination that "the Fukushima nuclear accident will never be forgotten and we will be a nuclear operator which continues to create unparalleled safety and increase the level of that safety to be greater today than yesterday and still greater tomorrow than today"
- TEPCO reports the state of progress of the Reform Plan to the Nuclear Reform Monitoring Committee, approved The "Reassessment of Fukushima Nuclear Accident and Nuclear Safety Reform Plan", on a regular basis. The Reform Plan is steadily implemented on the basis of the initiatives proposed by the Committee.

### Efforts towards Nuclear Reform - 2 Report on status of the Nuclear Safety Reform Plan

- The treatment of highly contaminated water at Fukushima Daiichi has been completed. Overall power station risks have been reduced through the steady implementation of contaminated water countermeasures, improvements in the working environment and other efforts.
- In the 1st quarter, the Nuclear Reform Monitoring Committee comprised of experts from both Japan and around the world as well as IAEA and WANO teams actively conducted more reviews than they previously had, and TEPCO has straightforwardly responded to the suggestions and items indicated.
- Steady progress has been made in nuclear safety reforms, which include the utilization of operational experience (OE) as well as daily retrospective reviews of the "10 characteristics of a sound nuclear safety culture".
- In the 2nd quarter, we will enhance the reliability of these mechanisms for release of all radiation data, analyze and assess the results of third-party reviews (IAEA), key performance indicators (KPI) and other results, and make improvements while continuing the PDCA cycle.

## Operational Alliances with Other Companies in Retail Sector

- In order to win out over the competition after full liberalization of the electricity market in April 2016 and increase TEPCO's corporate value, product capability needs to be created so as to continually provided attractive services as well as sales capabilities enabling the roll out and marketing of products nationwide.
- To that end, it is essential that we form alliances with other companies which complement our companies' capabilities, therefore we will begin joint reviews aimed at aligning TEPCO with a variety of companies.
- In the future as well, we will proceed to study alliances with various companies with which a synergistic effect can be generated while having an affinity with electric power.

<Activities for Forming Alliances with Various Companies>

Press Releases

- May 8: Basic agreement concluded with Recruit Holdings Co., Ltd. and Loyalty Marketing, Inc. on a business alliance for developing online services and the provision of point services
- May 13: With regard to an alliance with a mobile communications operator, review has begun on a basic agreement grating SoftBank Mobile KK preferential negotiating status
- May 20: Agreement concluded on a business alliance for providing a point service with Culture Convenience Club Co., Ltd.
- May 27: With Tokai Holdings Corporation, a joint review was begun aimed at forming a business alliance for electricity sales to households and business customers nationwide
- June 10: With USEN Corporation, a joint review was started with the aim of developing sets of products that combine electricity with products and services launched by USEN Corporation as well as sales of electricity to business customers around the country

### **Resumption and Expansion of Overseas Business**

- To fulfill our responsibility for the restoration of Fukushima, TEPCO will further solidify our operating base for expanding earnings, and we will utilized the technologies and knowhow developed both inside and outside Japan to proactively expand our business outside of Japan to offer our contribution to the world.
- On May, 2015, TEPCO announced an increase in our stake in the Umm Al Nar Power and Water Project in the UAE, and its participation in a gas-fired power generation and water desalination project in Qatar.

< Increase in our stake in the Umm AI Nar Power and Water Project in the UAE>

- A successful bid for the project was made in 2003 by International Power PLC (now "ENGIE") and Mitsui & Co., Ltd. Until now, TEPCO participated through TEPCO International B.V., a wholly-owned subsidiary, and held a 14% share of the project company.
- This acquisition raises TEPCO's share of the project from 14% to 20%.

| Location                       | Approx. 15km east of the capital Abu<br>Dhabi |
|--------------------------------|-----------------------------------------------|
| Power output                   | 2,200,000kW                                   |
| Seawater desalination capacity | 650,000 t/day                                 |
| Off-taker                      | Abu Dhabi Water and Electricity<br>Company    |
| Term                           | 20 years from 2007                            |

<Participation in a gas-fired power generation and water desalination project in Qatar>

- A successful bid was made jointly with Mitsubishi Corporation for a tender placed by Qatar General Electricity and Water Corporation, and a long-term power and water purchase agreement was concluded.
- TEPCO's share is 0.45%.

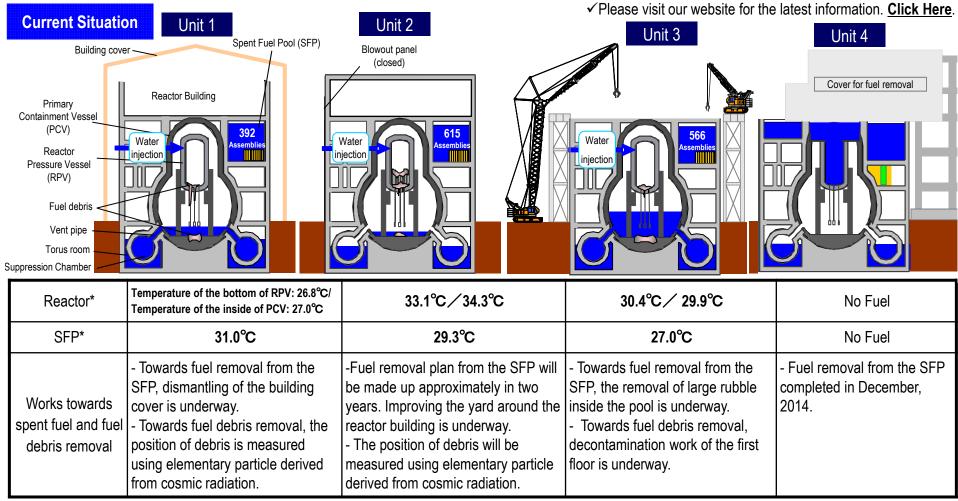

| Location                       | Approx. 20km south of the capital Doha          |

| Seawater desalination capacity | 590,000 t/day                                   |
| Off-taker                      | Qatar General Electricity and Water Corporation |
| Term                           | 25 years from 2017                              |

### The Current Status of Fukushima Daiichi Nuclear Power Stations and Future Initiatives

# Current Situation and Status of Units 1 through 4

- At Units 1, 2 and 3, it was evaluated that the comprehensive cold shutdown condition had been maintained, judging from the temperatures of the reactors and spent fuel pools as well as the density of radioactive materials. To facilitate the removal of spent fuel and fuel debris, works to remove large rubble and decontaminate inside the reactor building are underway.
- At Unit 1, as a result of measurement of the debris position, it was confirmed that there were no large fuel block at the core location. The measurement results, combined with investigative results inside the primary containment vessel, will be reflected to the fuel debris removal plan.

## Overview of the Mid-to-long Term Roadmap towards the Decommissioning of Fukushima Daiichi Nuclear Power Station (1)

- TEPCO released "Mid-to-long Term Roadmap towards the decommissioning of Fukushima Daiichi Nuclear Power Station Units 1 through 4" in December, 2011. Based on the continually-revised Roadmap, TEPCO, jointly with the national government, is advancing its efforts to maintain the units' stabilization and to decommission them in safe.
- In June 2015, the third revision of the Roadmap was made to reflect the progress of the decommissioning and countermeasures for contaminated water problem since the previous revision of June 2013, as well as the request of people in the areas around the power station. This third revision starts to cover Units 5 and 6 as well as Units 1 through 4.
- < Main Points of the third revision >
  - 1. Emphasize on risk reduction
  - 2. Make target process (milestone) clear
  - 3. Strengthen trusting relationship with local people and others by thorough disclosure of information
  - 4. Further reduction of the workers' exposure dose level, and to strengthen the management of the workers' safety and health environment
  - 5. Enhancement of the role of Nuclear Damage Compensation and Decommissioning Facilitation Corporation in the strategy of decommissioning technologies
- < Target process of removal of fuel and fuel debris of each unit >

Removal of fuel from spent fuel pool

| Start at Unit 1 | FY2020 |
|-----------------|--------|
| Start at Unit 2 | FY2020 |
| Start at Unit 3 | FY2017 |

Removal of fuel debris

| Decision on policy for each Unit            | 2 years later        |  |  |
|---------------------------------------------|----------------------|--|--|
| Determination of methods for the first Unit | First half of FY2018 |  |  |
| Start of the removal at the first Unit      | The end of 2021      |  |  |

### Countermeasures for contaminated water problem

- In December 2013, the government's Nuclear Disaster Response Headquarters arranged a set of preventative and multi-tiered measures based on the three basic policies for addressing contaminated water issues.
- On May 27, 2015, the treatment of RO concentrated water was completed (water remaining in tank bottoms removed), achieving a target
  of reducing risks associated with contaminated water.
- TEPCO will continue to implement the countermeasures for decrease in the amount of groundwater inflowing into reactor buildings, while proceeding the purification of the contaminated water.

< Target process of Countermeasures for contaminated water problem

#### Source: Cabinet and other meetings concerning decommissioning and contaminated water countermeasures (June 12, 2015)

© 2015 Tokyo Electric Power Company, Inc. All Rights Reserved.

<Main countermeasures>

TEPCO

#### 1. Eliminate contamination sources

- Multi-nuclide removal equipment (ALPS)
- -Remove contaminated water in the trenches
- Take measures to prevent water leakage from tanks
- Clean up seawater in the harbor, etc

### 2. Isolate water from contamination

- Pump up groundwater for by-passing
- Pump up groundwater near buildings
- Land-side frozen walls
- Implement broader area pavement (surface waterproofing)

#### 3. Prevent leakage of contaminated water

- Soil improvement by sodium silicate
- Increase tanks (welded-joint tanks)
- ·Sea-side impermeable walls, etc.

## Our Commitment to Nuclear Damage Compensation

- To facilitate prompt and fair compensation for nuclear damages, TEPCO continues to set and announce its own detailed compensation guidelines and procedures to individuals and business entities based on Government's Interim Guideline which comprehensively clarify certain types and ranges of damages to be compensated.
- Cumulative amount of compensations (including both permanent and temporary) already paid out totals approximately 5,056.4 billion yen as of July 17, 2015.

Decontamination works of radioactive materials discharged by Fukushima Daiichi Nuclear Power Station Accident are being implemented in accordance with the Act on Special Measures Concerning the Handling of Radioactive Pollution (the "Act") enacted in August 2011.

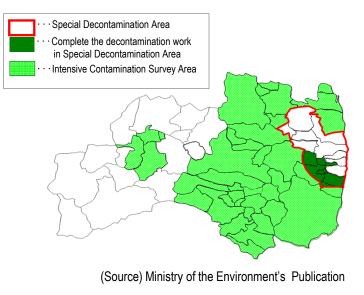

After that, separation of the roles of National Government and TEPCO was clarified in the cabinet decision on December 20, 2013, based on the policies that the business of decontamination and intermediate storage facilities would be accelerated while minimizing as far as possible the burden on the public purse, and at the same time providing a stable supply of power.

As a party concerned in the nuclear power accident, TEPCO is committed to engaging in the decontamination works with utmost efforts in collaboration with the national and local governments.

<Framework of decontamination based on the Act>

|                                                  | Special Decontamination Area (11 Municipalities in Fukushima)                                                                                                                                                                                                      | Intensive Contamination Survey Area (39 Municipalities in Fukushima, etc)                                                                                                                                                                                  |  |  |

#### <Clarification of Share of Roles between the National Government and TEPCO in the Cabinet Decision\* in December 2013>

[Basic Framework]

• Compensation should be paid properly under the responsibility of TEPCO. The expenses for decontamination and Interim Storage Facilities that was already conducted or planned at present are to be reimbursed by TEPCO after the completion of each work based on the Act.

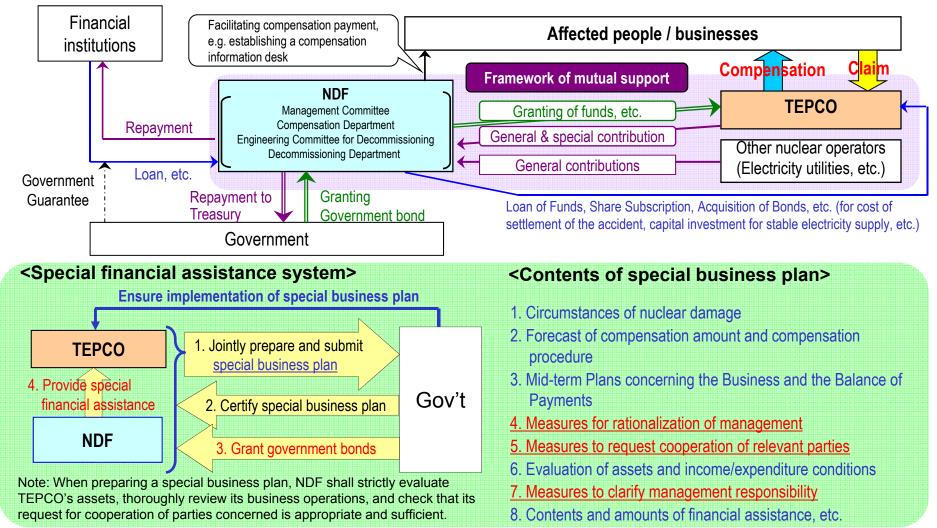

- Assistance for the required funds is to be provided based on the Nuclear Damage Liability Facilitation Fund Act. (An expansion of the Government bond: 5 trillion yen to 9 trillion yen) [New Way to Share Burdens between the National Government and TEPCO]
- An equivalent sum of the expenses for decontamination work already conducted or planned at present: After a reimbursement is made by TEPCO, the plan is to recover it from the profit on sale of stocks of TEPCO held by the Nuclear Damage Liability Facilitation Fund (the "Fund").
- An equivalent sum of the expenses for Interim Storage Facilities: After reimbursement is made by TEPCO, it will later be recovered from funds allocated from the Special Account for Energy Policy to the Fund. (No influence will be exerted on budgets for reconstruction funds and for the general account.)

\* The Policy "For Accelerating the Reconstruction of Fukushima From the Nuclear Disaster "

# Compensation Support by Nuclear Damage Compensation and Decommissioning

- After the enactment of the Nuclear Damage Liability Facilitation Fund Act, the Fund was officially established in September 2011.
- Due to the partial revision of the Nuclear Damage Liability Facilitation Fund Act in May 2014, the Fund is to be reorganized into the "Nuclear Damage Compensation and Decommissioning Facilitation Corporation (NDF)".
- To receive a financial assistance of NDF, the nuclear operator is required to prepare/modify the special business plans jointly with NDF and receive the approval of the competent minister.

| II. Further enhancement of heat removal and cooling function                                                                     |                                           |                     |                     |                     |                    |                                               |                                                  |
| (1) Installation of water source                                                                                                 |                                           |                     |                     | Completed           |                    |                                               |                                                  |
| (2) Installation of storage water barrier                                                                                        | Completed                                 | Under consideration | Under consideration | Under consideration | Completed          | Completed                                     | Completed                                        |
| (3) Additional installation of air-cooling gas turbine power generation cars                                                     |                                           |                     |                     | Completed           |                    |                                               |                                                  |
| (4)-1 Installation of high voltage power distribution board for emergency                                                        |                                           |                     |                     | Completed           |                    |                                               |                                                  |
| (4)-2 Installation of permanent cables for reactor buildings                                                                     | Completed                                 | Completed           | Completed           | Completed           | Completed          | Completed                                     | Completed                                        |
| (5) Installation of alternative submerged pumps and seawater heat<br>exchanging system                                           | Completed                                 | Completed           | Completed           | Completed           | Completed          | Completed                                     | Completed                                        |
| (6) Installation of alternative high pressure water injection system <sup>*1</sup>                                               | Under construction                        | Under consideration | Under consideration | Under consideration | Under construction | Under construction                            | Under construction                               |
| (7) Installation of aboveground filter vent                                                                                      | Under construction                        | Under consideration | Under consideration | Under consideration | Under construction | Termination of performance test* <sup>2</sup> | Termination of<br>performance test* <sup>2</sup> |
| (8) Installation of top venting on reactor buildings                                                                             | Completed                                 | Completed           | Completed           | Completed           | Completed          | Completed                                     | Completed                                        |
| (9) Installation of hydrogen treatment system in reactor buildings                                                               | Completed                                 | Under consideration | Under consideration | Under consideration | Completed          | Completed                                     | Completed                                        |
| (10) Installation of facilities to fill water up to the top of containment vessels                                               | Completed                                 | Under consideration | Under consideration | Under consideration | Completed          | Completed                                     | Completed                                        |
| (11) Additional environment monitoring equipments and monitoring cars                                                            |                                           | 2                   |                     | Completed           | -                  |                                               |                                                  |
| (12) Installation of warehouses for emergency on high ground <sup>*1</sup>                                                       |                                           |                     |                     | Completed           |                    |                                               |                                                  |
| (13) Improvement of earthquake resistance of pure water tanks on the<br>Ominato side                                             |                                           | _                   |                     |                     | Completed          |                                               |                                                  |
| (14) Preparation of concrete pump cars, etc.                                                                                     |                                           |                     |                     | Completed           |                    |                                               |                                                  |
| (15) Reinforcement of access roads                                                                                               | Completed                                 | _                   | _                   | _                   | _                  | _                                             | _                                                |
| (16) Environmental improvement of the seismic isolated building                                                                  |                                           | ·                   |                     | Completed           |                    | <u> </u>                                      | -<br>                                            |
| (17) Reinforcement of the bases of transmission towers <sup>*1</sup> and earthquake resistance of the switchboards <sup>*1</sup> | Completed                                 |                     |                     |                     |                    |                                               |                                                  |
| (18) Installation of tsunami monitoring cameras                                                                                  | Under construction Completed              |                     |                     |                     |                    |                                               |                                                  |
| TEPCO's voluntary safety measures *2 Perinheral works are ongoing                                                                |                                           |                     |                     |                     |                    |                                               |                                                  |

Under consideration

Completed

Under construction

- In November 2013, the Nuclear Regulation Authority (NRA) started plant and earthquake/tsunami countermeasures reviews as to the compliance under the New Regulatory Requirements for the Kashiwazaki-Kariwa Nuclear Power Station Units 6 and 7.
- TEPCO is planning to install underground filter vent facilities in addition to the aboveground filter vent facilities. On December 24, 2013, TEPCO submitted a revised version of the general outline of the plan regarding filter vent facilities to Niigata Prefecture and submitted documents seeking advance agreement to Kashiwazaki City and Kariwa Village concerning the underground filter vent facilities. After that, TEPCO received the advance agreement from Kariwa Village and Kashiwazaki city on February 3, 2014 and February 3 2015, respectively.
- TEPCO will comply with the Safety Agreement and will continue future discussion with Niigata Prefecture and the local governments and will make every effort to improve our delivery of easy-to-understand information.

- As of July 22, 2015, 48 Review Meetings and 155 hearings regarding plant examinations were held.
- Regarding earthquake/tsunami countermeasures examination, 15 Review Meetings and 45 hearings were conducted.

### <Review Status regarding Plant Examination>

- Review Meeting regarding Kashiwazaki-Karwa was restarted on July 22, 2014. After the organization structure of the Secretariat of NRA was changed on February 2015, the review meeting are smoothly held fifth or sixth times a month.
- On December 12, 2014, NRA conducted an on-site investigation on plant facilities. Approximately 100 items were inspected including equipments for securing safety and conditions of the drills.
- TEPCO has already reported about major requirements of 'Design Basis Facility' and 'Specialized Safety Facility', and then, will promptly report other requirements and respond to suggestions by NRA,

#### < Review Status regarding Earthquake/Tsunami Countermeasures Examination >

- ➤As to the possibility for the activity of all the faults found beneath the power station site and its vicinity, which is one of the main examination items, NRA instructed to improve the reliability of data at the Review Meeting in January 2014.
- TEPCO started additional investigations from March 2014 and the initially planned investigations were completed in May, 2015.
- >NRA conducted the third field survey on March 17, 2015.
- TEPCO has determined that those faults don't fall under the category of "faults with the possibility of becoming active in the future" in accordance with the New Regulatory Requirements, and is committed to give reports and explanations to NRA of such evaluations while conducting remaining geological survey while analyzing and evaluating the collected data.
