Fukushima Daiichi Nuclear Power Station Unit 1 Parameters of Temperature
(Typical Points)

[Note]
Some indicators might not be functioning properly beyond the normal condition for usage affected by the earthquake and subsequent events. We comprehensively evaluate situation in plants using all the available information from indicators and also focusing on trends, taking uncertainty of indicators into consideration.
Fukushima Daiichi Nuclear Power Station Unit 1  Parameters of Temperature (Feedwater Nozzle and Safety Valve (Exhaust Air))

Continuously measured temperatures of feedwater nozzle, N4B, and safety valve (exhaust air), 203-4A, have been rising since March 27. In order to compare them with other similar points, some measurement points have been added since 12:30 of March 28.

[Note] Some indicators might not be functioning properly beyond the normal condition for usage affected by the earthquake and subsequent events. We comprehensively evaluate situation in plants using all the available information from indicators and also focusing on trends, taking uncertainty of indicators into consideration.
## Fukushima Daiichi Nuclear Power Station Unit 1 Parameters of Temperature

**Note:** Some indicators might not be functioning properly beyond the normal condition for usage affected by the earthquake and subsequent events. We comprehensively evaluate situation in plants using all of the available information from indicators and also focusing on trends, taking uncertainty.
