

1. Unit 2 Primary Containment Vessel investigation (radiation protection)

➤ The amount of external radiation can be reduced by shielding installation, taking a distance, and reducing working hours.

1. Reduced by shielding installation

2. Reduced by taking a distance

3. Reduced by minimized working hours

1. Unit 2 Primary Containment Vessel investigation (estimated radiation)

- There is no impact from the estimated radiation because it is reduced by the shielding (wall made of steel, concrete, or lead).
- Radiation exposure of workers is also reduced by shielding and time management (work in shifts).
