

### Changes in the amount of water transferred from groundwater drains to reactor and turbine buildings and in the amount of groundwater and rainwater flowing into the buildings

### Amount of water transferred from groundwater drains to reactor and turbine buildings (From May 18, 2017 to May 24, 2017/ 24 hours per day)

\*①Amount of groundwater and rainwater flowing into reactor and turbine buildings: 119m<sup>3</sup>/day, ②Amount of water transferred from groundwater drains to reactor and turbine buildings: 26m<sup>3</sup>/day, ③(Total of ① and ②): 145m<sup>3</sup>/day, Rainfall: 8.5mm/week

\*1 Water gauges in reactor and turbine buildings were calibrated.

\*2 There are cases where there is a difference between the sum of each number on the table above and the "total" because the "total" is the sum of numbers with one digit after the decimal point.

\*3 The amount of water levels conjectures uncertain cross-section for corresponding to the water level, that is needed to calculate for storage capacity of centralized reactive waste treatment facility.
