[Investigation Results] Alarm activation "FLOW DIFFERENCE LARGE" at SFP Cooling System of Fukushima Daiichi Nuclear Power Station Unit 2

[Objectives]

Since November 28, the SFP cooling system of Unit 2 have often shutdown automatically due to alarm activation "FLOW DIFFERENCE LARGE".

We usually monitor measured values per flow gauge, however, the inlet/outlet flows were found so unstable that we conducted an inside inspection of the flow element.

Flow element

: Primary side pipe cuttings : Instrumentation pipe cuttings
