Analysis Results of the Sub-drain Water near the Central Waste Treatment Facility (γ)

Place of Sampling	Date and Time of Sampling	Analysis Item		
		I-131 (Bq/L)	Cs-134 (Bq/L)	Cs-137 (Bq/L)
Southeast of the Unit 4 Turbine Building				
Northeast of the Process Main Building				
Southeast of the Process Main Building				
South of the Miscellaneous Solid Waste Volume Reduction Treatment Building				
Southwest of the On-site Bunker Building				
West of the Incineration Workshop Building				
North of the Miscellaneous Solid Waste Volume Reduction Treatment Building				
Southeast of the On-site Bunker Building				

- Half life of each nuclide: I-131 (Approx. 8 days), Cs-134 (Approx. 2 years), Cs-137 (Approx. 30 years)
- Inequality sign (<) indicates that measurement result is less than the detection limit (ND).
- "-" indicates that the item was not included in the measurement or the sampling was stopped.
- Values are expressed in exponential notation. For example, "3.1E+01" means "3.1×10¹" and equals 31. Similarly, "3.1E+00" means "3.1×10⁰" and equals 3.1, and "3.1E-01" means "3.1×10⁻¹" and equals 0.31.
- Analysis at southwest of the on-site bunker building is conducted about once a week.
