## <Marine Organism Rearing Log>

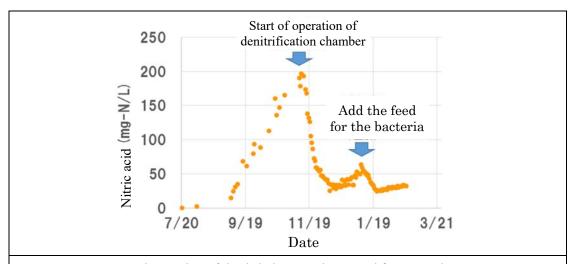

9 AM, February 24, 2023

Weather: Cloudy

Water temperature: 18.2°C

In the rearing training facility, the nitric acid concentration lowered its level because we fed the bacteria, and now nitric acid production and decomposition balance. The room temperature is around 20°C and it is warm compared to the rearing facility, and it can make the difference for both two facilities. (To be continued to next week.)

<The next report will be on February 27>

The number of dead abalones and removed for research

	No. of dead abalones		Removed for research	
	2/17-2/23	Accumulated	2/17-2/23	Accumulated
Regular seawater①	4	11	0	0
Regular seawater2	3	13	0	0
ALPS treated water a		23	0	0
ALPS treated water a	idded② 1	21	0	1

**<sup>★</sup>** For accuracy, counted from Friday of the previous week to Thursday.

<sup>\*</sup> No dead flounders
