

- The robotic arm that will be used to conduct an internal investigation of the Unit 2 PCV and also to retrieve fuel debris on a trial basis departed the JAEA Naraha Center for Remote Control Technology Development early in the morning on April 7, 2026 and arrived at the storage location on-site at the Fukushima Daiichi Nuclear Power Station at around 5:30 a.m.
- Going forward, preparations will be made to bring the robotic arm into the Unit 2 reactor building and install it, and it will be brought into the reactor building as soon as these preparations have been completed.
