

Comments following the 8th Inter-Ministerial Council for Steady Implementation of the Basic Policy on the handling of ALPS Treated Water and the 8th Inter-Ministerial Council for Contaminated Water, Treated Water and Decommissioning Issues

August 26, 2025

Tokyo Electric Power Company Holdings, Inc.

Today, August 26, the 8th meeting of the Inter-Ministerial Council for Steady Implementation of the Basic Policy on the handling of ALPS Treated Water and the 8th meeting of the Inter-Ministerial Council for Contaminated Water, Treated Water and Decommissioning Issues were held. At these meetings, the “implementation status on the basic policy on the handling of ALPS treated water and direction of future countermeasures” and the “status of progress with the decommissioning of the TEPCO Fukushima Daiichi Nuclear Power Station” were reviewed.

Since the commencement of discharge from August 2023, the discharge of ALPS treated water into the sea from the Fukushima Daiichi Nuclear Power Station has been carried out in compliance with international standards and in accordance with safety standard stipulated by domestic legislation. The discharge has been implemented as planned upon sufficiently confirming the safety of the human body and the environment.

We will remain vigilant and ensure safety and quality during the discharges into the sea as we engage in this initiative and fulfill our responsibilities as the entity in charge of this task while also “ensuring transparency through monitoring and IAEA reviews,” “disseminating information in an accurate and easy-to-understand manner domestically and internationally,” “promoting the consumption of marine products and implementing distribution countermeasures,” and “providing suitable compensation should damages be incurred.”

Furthermore, at a meeting of the Nuclear Damage Compensation and Decommissioning Facilitation Corporation’s Sub-Committee for the Evaluation of Fuel Debris Retrieval Methods held in July 2025, we reported the results of our deliberations on the preparatory process for full-scale fuel debris retrieval from Unit 3 in regards to which the Sub-Committee confirmed a certain degree of technical feasibility.

With the objective for the decommissioning of the Fukushima Daiichi Nuclear Power Station put forth in the Japanese Government’s Mid/Long-Term Roadmap of “completing decommissioning in 30~40 years,” decommissioning is a long-term endeavor. Large-scale and technically difficult decommissioning tasks will continue to be carried out going forward and we must therefore thoroughly ensure that we have secured the funds and human resources necessary for decommissioning. At the same time, we will continue to promote initiatives pertaining to regional symbiosis under our basic

principle of “coexistence of revitalization and decommissioning” and steadily move forward one step at a time while prioritizing safety and obtaining the understanding of the regional communities and society as a whole.

We believe that it is also vital to improve corporate value over the mid/long-term in order to complete the decommissioning tasks ahead and as such we will continue to deliberate various strategies with the support of the Nuclear Damage Compensation and Decommissioning Facilitation Corporation.
