## Nuclides Analysis Result of the Radioactive Materials in the Air at Fukushima Nuclear Power Stations

## (Data summarized on August 12)

Place of Sampling	The West Gate of Fukushima Daiichi NPS						② Density Limit Specified by the Reactor Regulation (Bq/cm³) (Density limit in the air which radiation workers breathe in
Time of Sampling	August 11, 2014 7:00 AM - 12:00 PM						
Detected Nuclides (Half- life)	①Density of Sample (Bq/cm3)	Scaling Factor (①/②)	①Density of Sample (Bq/cm3)	Scaling Factor (①/②)	①Density of Sample (Bq/cm3)	Scaling Factor (①/②)	is specified in section 4 of Appendix 2)
I-131 (Approx. 8 days)	ND	-					1E-03
Cs-134 (Approx. 2 years)	ND	ı					2E-03
Cs-137 (Approx. 30 years)	ND	-					3E-03

<sup>\*</sup> The radioactivity density is the sum of the volatile nuclides density and the particulate nuclides density.

O.OE-O is the same as O.O x 10 $^{-}$ O

Data of other nuclides is under examination.

The detection limits at the west gate of Fukushima Daiichi NPS are as follows: Volatile: I-131: Approx. 1E-7Bq/cm3, Cs-134: Approx.1E-7Bq/cm3, Cs-137: Approx.1E-7Bq/cm3 Particulate: I-131: Approx. 4E-8Bq/cm3, Cs-134: Approx.1E-7Bq/cm3, Cs-137: Approx.6E-8Bq/cm3 As the detection limit may vary depending on the detectors and sample properties, there are cases where nuclides below the detection limit are detected.

<sup>\*</sup> In the case of more than 2 nuclides, the sum of scaling factors to density limits is compared to 1.

<sup>\* &</sup>quot;ND" indicates that the measurement result is below the detection limit.
