

Removal of debris on top of the reactor buildings of Unit 3 and 4 of
Fukushima Daiichi Nuclear Power Station

September 9, 2011

Tokyo Electric Power Company

We will implement work to remove debris on top of the reactor building of Unit 3 and 4 of Fukushima Daiichi Nuclear Power Station based on “Roadmap towards Restoration from the Accident at Fukushima Daiichi Nuclear Power Station” that we announced on July 19, 2011.

As the ceilings and exterior walls have been damaged and piled up on top of the buildings in Unit 3 and 4 of the Power Station, we think we can prevent diffusion of radioactive materials and improve our working environment by removing debris in the early stages.

We will conduct work to remove debris on top of the reactor building of Unit 3 by unmanned heavy machineries remotely-operated at gantries constructed around the reactor building and the ground level to reduce exposed dose of workers.

We will conduct work to remove debris on top of the reactor building of Unit 4 by manned big heavy machineries at the ground level, as radiation dose in work areas is relatively low.

We will conduct work to remove debris in cooperation with external specialized institutions etc. without interrupting the investigation of the accident.

Work Schedule: [Unit 3] September 10, 2011 to around mid of 2012

[Unit 4] September 2011 to around mid of 2012
