

● Calculating electricity fee (monthly) under fuel cost adjustment system

$$\begin{array}{c}
 \text{Base fee} + \frac{\text{Volume of electric power}}{\text{Fee unit price (Inc. tax)}} \times \frac{\text{Electric power usage in one month}}{\text{Electric power usage in one month}} \pm \frac{\text{Fuel cost adjusted unit price (Inc. tax)}}{\text{Electric power usage in one month}} \times \text{Electric power usage in one month} \\
 \text{Fuel cost adjustment fee} \\
 \left(\begin{array}{l} \text{If average fuel price rises } + \\ \text{If average fuel price falls } - \end{array} \right)
 \end{array}$$

※Each quarter's "fuel cost adjusted unit price" is posted in advance in TEPCO's branch offices, service centers and so on and this information is also included in, for example, the electricity usage statements customers receive each month.
