

Nuclide analysis results of ocean soil

Reference

(Data summarized : 8/24)

Place of sampling	3km offshore of Odaka-ku	3km offshore of Iwasawa shore	
Date and time of sampling	9:30 am August 23, 2011	11:00 am August 23, 2011	
Detected nuclide (half-life)	Radioactivity density(Bq/kg)		
I-131 (Approx. 8 days)	ND	ND	
Cs-134 (Approx. 2 years)	67	450	
Cs-137 (Approx. 30 years)	79	510	

Evaluation is underway for other nuclide species.

In the case that the data is below measurable limit (I-131 approx. 7 Bq/kg), "ND" is stated.

Please note that these nuclides are sometimes detected even when they are below the limits, contingent on the detector or samples.
